FICTIONAL TEST PACKET. Not a real application.

Applicant's Name: Jordan Hale

STATEMENT OF PURPOSE

I have always been passionate about artificial intelligence and I believe Northwestern is one of the best places in the world to study it. Ever since my first programming class I knew I wanted a career in AI. The MSAI program would help me achieve my dreams and become a leader in the field. I am a hard worker and a team player, and I love to learn new things. Northwestern's reputation and the city of Chicago are also very exciting to me.

In the future I hope to work at a top company or maybe start my own company. A master's degree from Northwestern would open those doors. I am eager to take whatever courses the program recommends and to meet other talented students. Thank you for considering my application. I would be honored to join the incoming class and contribute to the Northwestern community.

EDUCATION

Undergraduate institution: University of Michigan
Degree: B.S. Computer Science, 2025
Cumulative GPA: 3.78

RESEARCH

Research assistant, University of Michigan information retrieval group, May 2024 to April 2025. I built a retrieval demo that the lab still runs for visitors.

PROJECTS

Lab retrieval demo. I implemented dense retrieval over a professor's lecture notes, with a small web interface. Two doctoral students used it during group open houses. The code is in the lab GitHub organization. I also built a course project that finetuned a classifier on public news data. That project stayed in the course repository.

WORK EXPERIENCE

Software engineering intern, Lakeshore Analytics, summer 2024. I shipped an internal search box over support tickets. Teaching assistant for an introductory programming course, fall 2024.

HONORS AND AWARDS

Dean's list, three semesters.

LETTERS OF RECOMMENDATION

Letter 1. Professor Helen Park, University of Michigan. "Jordan's retrieval demo is the one we turn on for visitors. The engineering is solid, the code is readable, and Jordan finished it without being managed. I recommend Jordan for a technical master's program."

Letter 2. Chris Feldman, engineering manager, Lakeshore Analytics. "Jordan shipped the support-ticket search and wrote tests for it. I would hire Jordan as a junior engineer. The work was specific and on time."
